

**Annual Drinking Water Quality Report
(Consumer Confidence Report)
January 1 – December 31, 2023
Denton County Fresh Water Supply District No. 11-A
Phone No. 713.860-6400
Public Water System (PWS) No. TX0610259**

OUR DRINKING WATER IS REGULATED

This report is intended to provide you with important information regarding your drinking water and the efforts made by the water system to provide safe drinking water. The report is based on analysis of data from numerous U.S. Environmental Protection Agency (EPA) required tests and is presented in the attached pages. We hope this information helps you become more knowledgeable about what's in your drinking water.

Information About Your of Drinking Water

The sources of drinking water (both tap water and bottled water) generally include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems, which are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact our system operator at the number listed on your water bill.

Special Notice

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline at (800) 426-4791. Upper Trinity Regional Water District continues to analyze our source water for the presence of Cryptosporidium, and Cryptosporidium has never been detected in any of the samples tested.

Information About Source Water

Our drinking water is surface water purchased from Upper Trinity Regional Water District. It comes from the following lakes: JIM CHAPMAN LAKE in Delta and Hopkins Counties and LEWISVILLE LAKE in Denton County.

The Texas Commission on Environmental Quality has completed a Source Water Susceptibility Assessment for all drinking water systems that own their sources. The report describes the susceptibility and types of constituents that may come into contact with your drinking water source based on human activities and natural conditions. The system from which we purchase our water received the assessment report. For more information on source water assessments and protection efforts at our system, contact Upper Trinity Regional Water District at (972) 219-1228.

Public Participation Opportunities and Requests for Additional Information

Date: Board of Directors generally meets the 3rd Monday of each month

Time: 6:30 p.m.

Location: 1230 Brendan Drive, Little Elm, Texas 75068

Phone No: 713.860-6400

To learn about future public meetings (concerning your drinking water), or to request to schedule one, or for any further information regarding this report, please call us.

En Español

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono 713.860-6400.

WATER FROM UPPER TRINITY REGIONAL WATER DISTRICT CONSTITUENTS DETECTED FOR 2023

DEFINITIONS AND ABBREVIATIONS - The following definitions and abbreviations pertain to scientific terms and measures used in the tables included in this report.

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level or MCL - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level or MRDL - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal or MRDLG - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

mg/L or ppm - milligrams per liter or parts per million. One part per million approximates one packet of artificial sweetener sprinkled into 250 gallons of iced tea.

NTU – nephelometric turbidity units. A measure of turbidity in water.

pCi/L – picocuries per liter. A measure of radioactivity in water equal to 10-12 curies. Quantity of radioactive material producing 2.22 nuclear transformations per minute.

ppb - parts per billion. One part per billion is roughly equal to one packet of artificial sweetener sprinkled into an Olympic-size swimming pool.

TOC – total organic carbon. Has no known health effects. However TOC provides a medium for the formation of disinfection by-products. These include trihalomethanes (THMs) and haloacetic acids (HAAs). Drinking water containing these by-products in excess of the MCL may lead to adverse health effects, liver or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.

TT - Treatment Technique. A required process intended to reduce the level of a contaminant in drinking water.

Turbidity – A measure of the clarity of water. While turbidity has no known health effects, it can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing symptoms such as nausea, cramps, diarrhea, and associated headaches.

REGULATED CONTAMINANTS DETECTED

Regulated at Upper Trinity Regional Water District's Treatment Plant

Date	Substance	Maximum Amount Detected in Water	Range Detected in Water	MCL	MCLG	Unit of Measure	Possible Source
2023	Barium	0.044	0.04 - 0.044	2.0	2.0	ppm	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
2023	Bromate [^]	5.5	2 – 7.5	10.0	0.0	ppb	By-product of drinking water disinfection
2023	Arsenic	1.5	0 – 1.5	10	0	ppb	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
2023	Chromium	1.9	0 – 1.9	100	100	ppb	Discharge from steel and pulp mills; Erosion of natural deposits
2023	Cyanide	154	68.7 – 154	200	200	ppb	Discharge from steel/metal factories; Discharge from plastic and fertilizer factories
2023	Fluoride ^{^^}	0.287	0.183 - 0.287	4.0	4.0	ppm	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
2023	Turbidity ^{^^^}	0.22	0.06 - 0.22	0.3	N/A	NTU	Soil runoff

[^]The MCL for Bromate is the running annual average of monthly averages, computed quarterly (30 TAC § 290.114(b)(C)).

^{^^}UTRWD does not add fluoride to its water.

^{^^^}100% of samples were below the 0.3 NTU turbidity limit for 2023

Radioactive Contaminants

2023	Beta/photon emitters	4.2	4.2 – 4.2	50	0	pCi/L	Decay of natural and man-made deposits
------	----------------------	-----	-----------	----	---	-------	--

^{^^^}EPA considers 50 pCi/L to be the level of concern for beta particles

Synthetic Organic Chemicals Including Pesticides and Herbicides

Date	Substance	Maximum Amount Detected in Water	Range Detected in Water	MCL	MCLG	Unit of Measure	Possible Source
2023	Atrazine	0.1	0-0.1	3.0	3.0	ppb	Runoff from herbicide used on row crops
2023	Simazine	0.08	0-0.08	4.0	4.0	ppb	Herbicide runoff

Regulated in Denton County Fresh Water Supply District No. 11-A's Distribution System

Inorganic Contaminants

Collection Date	Substance	Highest Level Detected	Range of Individual Samples Detected	MCL	MCLG	Unit of Measure	Violation	Likely Source
2023	Nitrate (measured as Nitrogen)	0.142	0.142 – 0.142	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
11/24/2020	Nitrite (measured as Nitrogen)	0.0232	0.0232 – 0.0232	1	1	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits

Disinfection By-Products

Collection Date	Substance	Highest Level Detected	Range of Individual Samples Detected	MCL	MCLG	Unit of Measure	Violation	Likely Source
2023	Total Trihalomethanes (TTHM)•	27	17.1 - 35	80	No goal for the total	ppb	N	By-product of drinking water disinfection
2023	Haloacetic Acids (HAA5)•	12	7.9 – 13.5	60	No goal for the total	ppb	N	By-product of drinking water disinfection

• The value in the Highest Level Detected column is the highest average of all sample results collected at a location over a year

MAXIMUM RESIDUAL DISINFECTANT LEVEL

Year	Disinfectant Used	Average Level of Quarterly Data	Lowest Result of Single Sample	Highest Result of Single Sample	MRDL	MRDLG	Unit of Measure	Source
2023	Total Chlorine Residual	2.94	2.06	3.78	4	4	mg/L	Disinfectant used to control microbes

LEAD AND COPPER

Date Sampled	Lead and Copper	MCLG	Action Level	90th Percentile	# Sites Over Action Level	Units	Violation	Likely Source
7/20/2022	Lead	0	15	3.1	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits
7/20/2022	Copper	1.3	1.3	0.59	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. This water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at (800) 426-4791 or at <http://www.epa.gov/safewater/lead>.

COLIFORM BACTERIA

Reported Monthly Tests Found No Coliform Bacteria
