

**Drought Contingency Plan for
Frisco West Water Control and Improvement District of Denton County**

SECTION 1

Introduction and Objectives

The purpose of this Drought Contingency Plan (the "Plan") is to provide for drought contingency measures for Frisco West Water Control and Improvement District of Denton County (the "District") as required by the Texas Commission on Environmental Quality ("TCEQ"). Since emergency conditions can occur rapidly, responses must also be enacted quickly. This plan has been prepared in advance considering conditions that will initiate and terminate the rationing program.

The District uses the following source(s) of water: groundwater pumped for Frisco Ranch customers, plus purchased treated water supplied by the Town of Little Elm ("Little Elm"). The total combined amount from these sources is normally sufficient to provide water for residential and commercial customers and to maintain adequate reserve quantities and pressure from storage facilities to meet emergency and firefighting demands.

Drought is a frequent and inevitable factor in the climate of Texas. Therefore, it is vital to plan for the effect that droughts will have on the use, allocation and conservation of water in the region. Drought contingency planning is one critical element of a water supplier's effort to reduce peak water demands and extend water supplies. The following are the central objectives of this Plan:

- Help assure reliability of water service to retail customers;
- Conserve the available water supply in times of drought and emergency;
- Maintain adequate water supplies for domestic use, sanitation and fire protection;
- Protect and preserve public health, welfare and safety;
- Minimize the adverse impacts of water supply shortages and
- Minimize the adverse impacts of emergency conditions affecting water supply.

Inframark, LLC (the "System Manager") will monitor water usage patterns, initiate public education efforts, and make recommendations to the Board on future conversation needs. The System Manager will develop public awareness notices, bill stuffers, and other methods that will serve as a constant reminder that water should be conserved at all times, not just during an emergency. The System Manager will review and evaluate any needed amendments or major changes due to changes in the District's service area, population, distribution system capacity, or supply. This review and evaluation will be done on an annual basis unless conditions necessitate more frequent reviews.

SECTION 2

Applicable Rules of Texas Commission on Environmental Quality

TCEQ rules governing the development of drought contingency plans for Municipal Uses by Public Water Suppliers, such as The District, are contained in Title 30, Part 1, Chapter 288, Subchapter B and Rule 288.20 of the Texas Administrative Code ("TAC"). A copy of these rules is included in Appendix A. The rules define a drought contingency plan as:

"A strategy or a combination of strategies for temporary supply and demand management responses to temporary and potentially recurring water supply shortages and other water supply emergencies."

Minimum Drought Contingency Plan Requirements

The minimum requirements contained in the TAC for drought contingency plans are covered in this Plan as follows:

Rule	Subject	Section
288.20(a)(1)(A)	Informing the Public & Providing Opportunity For Input	Section 3
288.20(a)(1)(B)	Provisions for Continuing Public Education & Information	Section 4
288.20(a)(1)(C)	Coordination with the Regional Water Planning Group	Section 10
288.20(a)(1)(D)	Criteria for Initiation Monitoring & Termination of Stages	Section 7
288.20(a)(1)(E)	Drought and Emergency Response Stages	Section 7
288.20(a)(1)(F)	Targets to be Achieved During Drought	Section 7
288.20(a)(1)(G)	Water Supply & Demand Mgm't Measures for Each Stage	Section 7
288.20(a)(1)(H)	Procedures for Initiation & Termination of Drought Stages	Section 7
288.20(a)(1)(I)	Procedures for Granting Variances	Section 8
288.20(a)(1)(J)	Procedures for Enforcement of Mandatory Restrictions	Section 9
288.20(a)(3)	Consultation with Wholesale Suppliers	Section 7
288.20(b)	Notification of Implementation of Mandatory Measures	Section 7
288.20(c)	Review & Update of Plan	Section 11

Also included in this Plan are statements of authorization (Section 5) and application (Section 6).

SECTION 3

Public Involvement

The District previously provided opportunity for public input in the development of this Plan by the following means:

- Made the draft Plan available on the District's website;
- Provided a copy of the draft Plan to anyone requesting a copy and
- Held a public meeting at a time and location convenient to the public and provided

written notice to the public concerning the draft Plan and meeting.

SECTION 4

Provisions for Continuing Public Education and Information

The District will provide public information about the Plan at least annually, including information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage. This information will be provided by any of the following means:

- Prepare bulletins / newsletters describing the Plan and make said bulletins / newsletters available in utility bills, public facilities or other appropriate places;
- Make the Plan and its requirements available on the District website;

When provisions of the Plan are activated or when a drought response stage changes, the District will notify local media of the relevant issues, the appropriate drought response stage and the specific actions required of the public. When mandatory provisions of the Plan are implemented, TCEQ shall be notified within five (5) business days. The information will also be publicized on the District website. Billing inserts may also be used as appropriate means of disseminating information to the public.

SECTION 5

Authorization

The Board, or official designees, are hereby authorized and directed, individually or as a group, to implement the applicable provisions of this Plan upon determination that such implementation is necessary to protect public health, safety and welfare, and to comply with applicable regulations or contractual requirements. Except as otherwise provided in the Plan, the Board, or official designees, individually or as a group, shall have the authority to initiate, to enforce and to terminate the measures provided herein for a drought or other water supply emergency.

The District boundaries contain two (2) separate residential developments: Frisco Ranch and Frisco Hills (collectively, the "Developments"). The Developments are served by 2 (two) separate water supply subsystems, respectively (the "Subsystems"). Consequently, the Subsystems could have varying levels of supply and demand issues at any given time. Accordingly, the Board, or official designees, individually or as a group, shall have the authority to implement different applicable provisions of this Plan to each Subsystem independently, should such independent implementation be deemed necessary to protect the public health, safety and welfare, of each Development and to comply with applicable regulations or contractual requirements. When the Board or official designees, individually or as a group, are determining the necessary Drought and Emergency Response Stage to be implemented, the "Requirements for Initiation" for each Drought and Emergency Response Stage can be considered for either each Subsystem independently or for the Subsystems combined, in which ever manner the Board or official designees, individually or as a group, deem appropriate under the circumstances.

SECTION 6

Application

The provisions of this Plan shall apply to all persons, customers and property utilizing water provided by the District. The terms "person" and "customer" as used in the Plan include individuals, corporations, institutions, partnerships, associations and all other legal entities.

SECTION 7

Drought Contingency Plan - - Emergency Response Stages

The Board, or official designees, may order the initiation or termination of a drought response stage or water emergency when one or more of the trigger conditions for that stage is met as provided in this Section. The triggering criteria described below are based on the ability of the District to deliver treated water to its customers and / or the ability of Little Elm to deliver treated water to the District. Water supply and / or demand conditions are monitored by the District on a regular basis to determine when conditions warrant initiation or termination of a drought response stage.

7.1 Initiation of Drought Response Stages

The following actions will be taken when a drought response stage is initiated:

- The public will be notified through local media, the District website and other appropriate methods as described in Section 3 above;
- **When any mandatory provisions of the Plan are implemented, the District will notify the Executive Director of the TCEQ within five (5) business days.**

When specific drought response stages are announced by Little Elm, the District and other entities receiving water from Little Elm are required to implement the appropriate measures. For other trigger conditions not announced by Little Elm, the Board, or official designee, may implement contingency measures based on local conditions affecting the District; or for good cause may decide not to order the implementation of a drought response stage or water emergency even though one or more trigger criteria for the stages are met. Various factors are taken into account when making a decision about such stages, including circumstances unique to the District, the time of year, weather conditions, the anticipation of replenished water supplies, use of an alternate water resource or the anticipation that additional facilities will become available on a timely basis to meet needs. The reason for such decision will be documented and communicated to Little Elm for the record.

7.2 Termination of Drought Response Stages

The following actions will be taken when a drought response stage is terminated:

- The public will be notified through local media, the District website, and other appropriate methods as described in Section 3 above;
- Unless otherwise directed by Little Elm, the District will notify Little Elm by telephone, with a follow-up letter, e-mail or fax to confirm the particular drought response stage has been terminated and
- **When any mandatory provisions of the Plan are terminated, the District will notify the Executive Director of the TCEQ within five (5) business days.**

The Board, or official designee, may decide not to order the termination of a drought response stage or water emergency even though the conditions for termination of the stage are met. Various factors could influence such a decision about whether to end a specific stage, including circumstances unique to the District, the time of year, weather conditions, and conditions within the local water distribution system or anticipation of other relevant factors that warrant continuation of measures for the drought stage. The reason for such decision will be documented and communicated to Little Elm for the record.

7.3 Drought and Emergency Response Stages

A. Stage 1 – Water Wise

Requirements for Initiation

The following are key conditions, any one of which may trigger this stage:

- Little Elm has announced Stage 1, which may be a result of:
- Water demand has reached or exceeded [80%] of delivery capacity for four consecutive days; or
- Water demand is **approaching** a level that will cause a reduced delivery capacity for all or part of the distribution system, as determined by the District or
- The water supply system has a **significant limitation** due to failure of or damage to important water system components.

Goal

Stage 1 is intended to raise public awareness of potential drought and water emergency problems. The goal for water use reduction under Stage 1 is one percent (1%) of total daily water use that otherwise would have occurred in the absence of drought contingency measures. If circumstances warrant, the District can set a goal for greater or less water use reduction.

Water Use Restrictions for Reducing Demand

Under this stage, customers will be requested to conserve water through mandatory and voluntary measures, and to comply with restrictions on certain non-essential water use as

provided below. Specific measures to be implemented during the stage will be determined by the Board, or official designee. The Board or official designee may also take other actions not listed, if deemed necessary.

- Require reduction of water use through maximum 2-days-per-week landscape irrigation schedule during the months of April through October and 1-day-per-week during the months of November through March. This provision as identified in the District's Water Conservation Plan is mandatory under this Water Wise stage for automatic irrigation systems and hose-end sprinklers. Irrigation of landscaped areas and building foundations is permitted at any time if it is by means of a hand-held hose, drip irrigation or soaker hose systems.
- Require reduction of water use through time-of-day landscape irrigation schedule. This provision as identified in the District's Water Conservation Plan is mandatory under this Water Wise stage. No outdoor watering with automatic irrigation systems and hose-end sprinklers can occur from 10:00 a.m. to 6:00 p.m. Customers with street addresses ending in even numbers (0, 2, 4, 6, 8) may irrigate on Tuesday and/or Friday. Customers with street addresses ending in odd numbers (1, 3, 5, 7, 9) may irrigate on Saturday and/or Wednesday. Any property 1) owned by the applicable Homeowner's Association or 2) deemed a common area or open space of the District may irrigate on Monday and/or Thursday. Irrigation of landscaped areas and building foundations is permitted at any time if it is by means of a hand-held hose, drip irrigation or soaker hose systems.
- Encourage reduction in frequency of washing or rinsing of vehicles and recommend use of bucket / container, hand-held hose with positive shut-off valve or commercial car wash.
- Encourage reduction in frequency of draining and refilling swimming pools.
- Encourage retail customers to avoid waste during recreational use (water used for leisure and entertainment purposes) from faucets, hoses or hydrants.
- Increase public education efforts on ways to reduce water use.
- Review internal operational conditions and capabilities by the District] and intensify efforts on leak detection and repair.
- Be alert to internal non-essential water use by the District (examples include vehicle washing, operation of ornamental fountains, landscape uses for parks or medians, etc.).

Termination

Stage 1 may terminate when Little Elm terminates its Stage 1 condition or when the circumstances that caused the initiation of Stage 1 – Water Wise no longer prevail.

B. Stage 2 – Water Watch

Requirements for Initiation

The following are key conditions, any one of which may trigger this stage:

- Water demand has reached or exceeded [85%] of delivery capacity for three consecutive days; or
- Water demand **has reached** a level that is causing a reduced delivery capacity for all or part of the distribution system, as determined by the District; or
- The water supply system is **unable to deliver** water at **normal rates** due to failure of or damage to major water system components or
- A **significant deterioration** in the quality of a water supply, being affected by a natural or man-made source.

Goal

The goal for water use reduction under Stage 2 is a three percent (3%) reduction in the use that would otherwise have occurred in the absence of drought contingency measures. If circumstances warrant, the District can set a goal for greater or less water use reduction.

Water Use Restrictions for Reducing Demand

Under this stage, customers will be requested to continue all voluntary measures, plus adhere to the following mandatory measures to conserve water and to comply with restrictions on certain non-essential water uses as provided below. Specific measures to be implemented during this stage will be determined by the Board, or official designee. The Board, or official designee may also take other actions not listed, if deemed necessary. All requirements of Stage 1 shall remain in effect during this Stage 2, plus the following incremental or new measures:

- Require reduction of water use through time-of-day landscape irrigation schedule. Customers with street addresses ending in even numbers (0, 2, 4, 6, 8) may irrigate on Tuesday and/or Friday. Customers with street addresses ending in odd numbers (1, 3, 5, 7, 9) may irrigate on Saturday and/or Wednesday. Any property 1) owned by the applicable Homeowner's Association or 2) deemed a common area or open space of the District may irrigate on Monday and/or Thursday.
- Require reduction of water use through time-of-day landscape irrigation schedule. No outdoor watering can occur from 10:00 a.m. to 6:00 p.m. Irrigation of landscaped areas and building foundations is permitted at any time if it is by means of a hand-held hose, drip irrigation or soaker hose systems.
- Prohibit recreational water use (water used for leisure and entertainment purposes) including use of faucets or hoses in such a manner that creates runoff or other wastes.

- Restrict washing any motor vehicle, motorbike, boat, etc. to the use of a hand-held bucket or a hand-held hose equipped with a positive shutoff nozzle, except on the premises of a commercial car wash.
- Prohibit hosing off paved areas, buildings, windows or other hard surfaces. Normal window washing is okay.
- Encourage further reduction in draining and filling of swimming pools.
- Further accelerate public education efforts on ways to reduce water use.
- Reduce internal water use by the District.
- Encourage retail customers to wait until the current drought or water emergency situation has passed before establishing new landscaping.
- Initiate engineering studies to evaluate alternatives to mitigate drought conditions should conditions worsen.
- The District is restricted to day-of-week and time-of-day landscape watering schedule except for parks and golf courses.
- Require reduction of water use through day-of-week landscape watering schedule for parks and golf courses.
- Announce enforcement efforts and penalties for noncompliance including violation warnings. Enforcement to be primarily based on complaints being received.

Termination

Stage 2 may terminate when Little Elm terminates its Stage 2 condition or when the circumstances that caused the initiation of Stage 2 no longer prevail. Upon termination of Stage 2, Stage 1 – Water Wise will remain in effect unless otherwise announced by the District or Little Elm.

C. Stage 3 – Water Warning

Requirements for Initiation

The following are key conditions, any one of which may trigger Stage 3:

- Water demand has reached or exceeded [90%] of delivery capacity for two consecutive days; or
- Water demand **exceeds** the delivery capacity for all or part of the distribution system, as determined by the District; or

- Water supply system is **unable to deliver** water in **adequate quantities** due to failure of or damage to major water system components; or
- **Interruption** of one or more water supply source(s).
- Natural or man-made contamination of the water supply source that **threatens water availability**.

Goal

The goal for water use reduction under Stage 3 is a reduction of 10 percent (10%) in the use that would otherwise have occurred in the absence of drought contingency measures. If circumstances warrant, the District can set a goal for greater or less water use reduction.

Water Use Restrictions for Reducing Demand

Customers will comply with the requirements and mandatory restrictions on non-essential and other water uses as provided below. Specific measures to be implemented during this stage will be determined by the Board, or official designee. The Board, or official designee, may also take other actions not listed, if deemed necessary. All requirements of Stage 1 and Stage 2 shall remain in effect during this Stage 3, plus the following incremental or new measures:

- Violations observed and documented by the System Manager shall incur penalties as follows:
 - First-time violations will incur a \$100.00 fine.
 - Second-time violations will incur a \$200.00 fine.
 - Third-time violations and any subsequent violations will incur a \$300.00 fine and disconnection of water pursuant to the District's Rate Order.
 - Unpaid assessed fines related to violations of water use restrictions shall incur late payment penalties and may result in termination of water service.

Termination

Stage 3 may terminate when Little Elm terminates its Stage 3 condition or when the circumstances that caused the initiation of Stage 3 no longer prevail. Upon termination of Stage 3, Stage 2 – Water Watch will be initiated, unless otherwise announced by the District or the Town of Little Elm.

D. Stage 4 – Water Critical

Requirements for Initiation

The following are key conditions, any one of which may trigger Stage 4:

- the Town of Little Elm has initiated its Stage 4, which may be a result of:
- Water demand has reached or exceeded [90%] of delivery capacity for one day; or
- Water supply system is **unable to deliver** adequate quantities of water due to failure or damage of major water system components; or
- **Interruption** of one or more water supply sources(s) or
- Natural or man-made **contamination** of the water supply available to the District.

Goal

The goal for water use reduction under Stage 4 is fifteen percent (15%) in the use that would have occurred in the absence of drought contingency measures. If circumstances warrant, or as required by Little Elm, the Board, or official designee, may set a goal for further water use reduction.

Water Use Restrictions for Reducing Demand

Specific actions taken during this stage, including water allocation, according to the actual circumstances, will be determined by the Board, or official designee. All requirements of Stages 1, 2 and 3 shall remain in effect during Stage 4 plus the following additional measures:

During Emergency Conditions, the governing body of the District may modify, amend or extend any provisions of this Plan as warranted by the conditions and circumstances.

- Require reduction of water use through maximum 1-day-per-week landscape irrigation, regardless of the time of year. This provision as identified in the District's Water Conservation Plan is mandatory under this Stage 4 for automatic irrigation systems and hose-end sprinklers. Irrigation by means of automatic irrigation systems and hose end sprinklers can occur between 6:00 a.m. and 10:00 a.m. and between 6:00 p.m. and 12:00 midnight. Customers with street addresses ending in even numbers (0, 2, 4, 6, 8) may irrigate on Saturday. Customers with street addresses ending in odd numbers (1, 3, 5, 7, 9) may irrigate on Sunday. Any property 1) owned by the applicable Homeowner's Association or 2) deemed a common area or open space of the District may irrigate on Tuesday. Irrigation of landscaped areas and building foundations is permitted between 6:00 p.m. and 6:00 a.m. if it is by means of a handheld hose, drip irrigation, or soaker hose system.
- Restrict vehicle washing to commercial car wash facilities. Such vehicle washing shall occur only between the hours of 6:00 a.m. and 10:00 a.m. and between 6:00 p.m. and 12:00 midnight.
- Restrict the filling, refilling or adding of water to swimming pools, wading pools, hot tubs, spas and ornamental ponds.

- Restrict watering of nursery plant stock to the designated off-peak hours applicable to residential customers.
- Implement a rate surcharge on retail usage.
- Step-up enforcement activities.
- Implement utilization of alternative water sources if available.
- Violations and fines will follow the same format as Stage 3.

Termination

Stage 4 may terminate when Little Elm terminates its Stage 4 condition or when the circumstances that caused the initiation of Stage 4 no longer prevail. Upon termination of Stage 4, Stage 3 – Water Warning will remain in effect unless otherwise announced by the District or the Town of Little Elm.

E. Stage 5 – Water Emergency

Requirements for Initiation

The following are key conditions, any one of which may trigger Stage 5:

- the Town of Little Elm has initiated its Stage 5, which may be a result of:
- Water demand has reached or exceeded [98%] of delivery capacity for one day; or
- Water supply system is **unable to deliver** adequate quantities of water due to failure or damage of major water system components; or
- **Interruption** of one or more water supply sources(s) or
- Natural or man-made **contamination** of the water supply available to the District.

Goal

The goal for water use reduction under Stage 5 is twenty-five percent (25%) in the use that would have occurred in the absence of drought contingency measures. If circumstances warrant, or as required by Little Elm, the Board, or official designee, may set a goal for further water use reduction.

Water Use Restrictions for Reducing Demand

Specific actions taken during this stage, including water allocation, according to the actual circumstances, will be determined by the Board, or official designee. All requirements of Stages 1, 2, 3 and 4 shall remain in effect during Stage 5 plus the following additional measures:

During Emergency Conditions, the governing body of the District may modify, amend or extend any provisions of this Plan as warranted by the conditions and circumstances.

- Prohibit irrigation of landscaped areas. Foundations and trees may be watered for 2 hours per day with handheld hose, bucket, or drip irrigation / soaker hose.
- Prohibit vehicle washing except as necessary for health, sanitation, or safety reasons.
- Prohibit the filling, refilling or adding water to swimming pools, wading pools, hot tubs, spas and ornamental ponds.
- Prohibit non-essential internal water use by the District.
- Increase the rate surcharge on retail usage.
- Step-up enforcement activities.
- Implement utilization of alternative water sources if available.
- Violations in this Stage 5 observed and documented by the System Manager shall incur penalties as follows:
 - First-time violations will incur a \$100.00 fine.
 - Second-time violations will incur a \$250.00 fine.
 - Third-time violations and any subsequent violations will incur a \$350.00 fine and disconnection of water pursuant to the District's Rate Order.
 - Unpaid assessed fines related to violations of water use restrictions shall incur late payment penalties and may result in termination of water service.

Termination

Stage 5 may terminate when Little Elm terminates its Stage 5 condition or when the circumstances that caused the initiation of Stage 5 no longer prevail. Upon termination of Stage 5, Stage 4 – Water Critical will remain in effect unless otherwise announced by the District or the Town of Little Elm.

SECTION 8

Variances

The Board, or official designee, may grant temporary variances for existing water uses otherwise prohibited under this Plan if one or more of the following conditions are met:

- Failure to grant such a variance would cause an emergency condition adversely affecting health, sanitation or fire safety for the public or the person requesting the variance;
- Compliance with this Plan cannot be accomplished due to technical or other limitations and
- Alternative methods that achieve the same level of reduction in water use can be implemented.
- Newly installed or replaced lawns for single family lots will be granted a 30-day exemption from compliance with this Plan. The lot owner or builder seeking the 30-day exemption is required to notify the Board in writing of the date the owner/builder requests that the 30-day exemption begin. Failure to notify the Board of the request for exemption could result in a violation under this Plan.

Variations may be granted or denied at the discretion of the Board, or official designee. However, no variances shall be granted under any circumstance if the District is in Stage 5 – Water Emergency. All petitions for variances should be in writing and should include the following information:

- Name and address of the owner and a licensed Texas irrigator responsible for the variance;
- Purpose of water use;
- Specific provisions from which relief is requested;
- Detailed statement of the adverse effect of the provision from which relief is requested;
- Description of the relief requested including a proposed irrigation plan;
- Monthly report verifying the goal reductions;
- Period of time for which the variance is sought;
- On-call personnel with contact information for 24-hour a day repair response within one hour of notice;
- Alternative measures that will be taken to reduce water use and

- Other pertinent information.

SECTION 9

Enforcement

9.1 Stages 1 and 2 Enforcement

Mandatory water use restrictions are imposed in Stages 1 and 2 of the Plan. These mandatory water use restrictions will be enforced by any combination of warnings, reconnection fees, suspension of service, monetary penalties, citations and fees as follows and authorized by the governing body:

- On the first violation, customers will be notified by a sign or door-hanger that they have violated the mandatory water use restriction;
- On the second violation, the District may request the customer to disconnect its irrigation system; or, if the customer doesn't comply with said request, the District may disconnect said irrigation system. In addition, the customer shall be assessed fines in the following amounts: 1) residents shall be subject to a fine \$75.00, and 2) any developer, builder, Homeowner's Association, or other commercial entity shall be subject to a fine of \$500.00. Each day that one or more of the provisions in this Plan is violated shall constitute a separate violation subject to an additional fine in the same amount. In addition, the District may post notification of violation with reconnection fees.
- On the third violation, the District will disconnect water service and post notification of violation with reconnection fees. The customer shall again be assessed a fine in the following amounts: 1) residents shall be subject to a fine \$75.00, and 2) any developer, builder, Homeowner's Association, or other commercial entity shall be subject to a fine of \$500.00. Each day that one or more of the provisions in this Plan is violated shall constitute a separate violation subject to an additional fine in the same amount.
- The District maintains the right, at any violation level, to disconnect irrigation systems and or total water services to a customer with reconnection fees and possible monetary penalties authorized by action of the governing body.

9.2 Stages 3, 4, and 5 Enforcement

Mandatory water use restrictions are imposed in Stages 3, 4, and 5 of the Plan. These mandatory water use restrictions will be enforced by any combination of warnings, reconnection fees, suspension of service, monetary penalties, citations and fees as follows and authorized by the governing body and described in Section 7.3 of this Plan.

SECTION 10

Coordination with Regional Water Planning Group, the Town of Little Elm and Others

The District has coordinated with the Region C Water Planning Group and Little Elm to ensure consistency with the approved regional water plan and the Little Elm's drought contingency plan. The District will provide a copy of the plan to Little Elm and the Region C Water Planning Group.

SECTION 11

Review and Update of Drought Contingency Plan

As required by TCEQ rules, the District will review and update this Plan every five years. The Plan will be updated as appropriate based on new or updated information, such as the adoption or revision of the regional water plan, or based on new or updated information related to the District's service area, population, water supply, transmission system -- and, for compliance with the Town of Little Elm requirements. The next review and update, as appropriate, of the drought contingency plan must be completed no later than five (5) years from the date of adoption of this Plan. Any revised Plan must be submitted to TCEQ within 90 days of adoption by the community water system.
